

Ultra Low Ammonia CL60

Low ammonia latex from KAPVL

Ultra low Ammonia CL60 is a standardized source material for the production of natural rubber products using green chemistry to modify Natural cis-poly isoprene produced by yield of Hevea brasiliensis tree.

Ultra low Ammonia CL60 is produced through a multi-step advanced scientific process using green chemistry and added eco-friendly stabilizer resulting in cleaner and purer eco-friendly natural rubber latex with low ammonia. The benefits are

- Ammonia Odor is very low
- Excellent resistance to ageing
- Enhances stability
- Superior coating performance
- Less possibility of Zinc-Ammonia complex during compounding

It is natural bactericide, lesser mold stain, No de-ammoniation, No loss of rubber and biodegradable and suitable for making following latex goods

- Foam sponges/Foam bedding and accessories
- Examination Gloves
- Surgical Gloves
- Condoms
- Medical Devices
- Adhesives and Coatings
- Threads and Textiles
- Balloons
